For public release:

Allscripts used the following usability design in developing and designing their health IT module, Allscripts ePrescribe: NISTIR 7741.

National Institute of Standards and Technology. (2010). *NIST Guide to the Processes Approach for Improving the Usability of Electronic Health Records* (NISTIR 7741). Gaithersburg, MD. www.nist.gov/manuscript-publication-search.cfm?pub_id=907313.

According to the *National Institute of Standards and Technology (NIST) Guide to the Processes Approach for Improving the Usability of Electronic Health Records*, EHRs should support a process that provides a high level of usability for all users. The goals are for users to interact with the system safely, effectively, efficiently, and with an acceptable level of satisfaction. To this end, design to optimize for safety, effectiveness, efficiency and user satisfaction was utilized throughout the design and development cycle.

I hereby attest that all above statements are true, as an authorized signing authority on behalf of my organization.

A handwritten signature in black ink, appearing to read "Jill Helm", is written over a faint, larger version of the signature.
