HITRUST Certification

Your partners for HITRUST

As one of the first HITRUST Common Security Framework (CSF) Assessors, our team of highly-skilled practitioners has performed over 275 certifications for large and small organizations, delivering exceptional results for our healthcare IT clients. When you work with us to achieve your certification, we guide you every step of the way, leveraging a complete set of HITRUST policies, procedures, and document templates to jumpstart your process.

Proven Expertise

Drummond has been a trusted Test Lab and Certification Body for healthcare and non-healthcare services including HITRUST since 1999. Drummond uses only HITRUST Certified Common Security Framework Practitioners (CCSFP) who are CISSP, CISA, and CISM certified.

Proven Processes

To streamline and automate the certification process, we developed the Drummond Compliance System (DCS) — a project management portal that expedites the pre-assessment phase and evidence collection process. Our clients have been able to save as much as 50% off labor costs using our proven methodology and automation processes.

Partner for Success

For organizations with multiple compliance certification requirements, we offer a combined audit service – assess once, report many – to reduce costs. Drummond can leverage findings from a single assessment across multiple requirements like HIPAA, NIST, ISO, PCI, FTC and Cobit.

Secure your Future

To meet your needs, we offer fixed fee pricing and flexible payment options including monthly subscriptions. Our team of highly-skilled experts is ready to collaborate with you and your team on your HITRUST certification and beyond, as we partner with you to achieve compliance and protect your business.

Go beyond HITRUST and protect what matters most with Cybersecurity Services.

If you're interested in improving your security practices beyond your HITRUST certification, we offer information security services with Lares, our strategic partner. Lares provides services from penetration testing to application security testing to physical security services, to help protect your business in today's highly volatile environment. As a pioneer in developing Red and Purple Teaming best practices, Lares identifies vulnerabilities in networks and applications previously undetected by other third party testing firms or internal IT security staff. Lares also provides Social Engineering-based Penetration Testing for additional protection against social engineering exploits — one of the most common methods of attack. Lares' team of experts can then work collaboratively with your organization to continuously improve your security programs, and protect what matters most.

About HITRUST

Founded in 2007, HITRUST Alliance is a not-for-profit organization whose mission is to champion programs that safeguard sensitive information and manage information risk for organizations across all industries and throughout the third-party supply chain. The HITRUST CSF was developed in collaboration with healthcare and security experts, is a certifiable information security framework that provides organizations with an actionable roadmap tailored to the unique needs of the healthcare industry. To date, the HITRUST CSF is the most widely adopted security framework in the U.S. healthcare industry and has become the de facto standard. For more information on the HITRUST standard go to: www.hitrustalliance.net
