

2015 EDITION CURES ATTESTATIONS JOURNEY

ONLINE REGISTRATION

SELECT APPLICABLE CRITERIA

Our online [registration](#) is efficiently designed to help you embark on your attestation journey once a decision is made to retest your certified health IT product, add new criteria, or report any major or minor changes to certified products.

MAINTAIN COMPLIANCE

QUARTERLY ATTESTATION

Under the ONC 2015 Edition program, health IT developers are required to report updates made to their certified health IT product on a quarterly basis. Drummond's [customer portal](#) simplifies this process by providing access to each quarterly attestation questionnaire and necessary certification documents. Cures updates also may be reported using this process.

2015 EDITION CURES UPDATES

FINAL RULE RESOURCES

The ONC's 2015 Edition Cures Act [Final Rule](#) has new and revised criteria, but it does not require a full recertification for 2015 Edition certified products. In some cases, developers may attest to meeting compliance and may not be required to conduct live testing for their 2015 Edition certified product(s). Our highly trained test proctors are prepared to answer all technical questions and will help you navigate additional criteria requirements outlined [here](#).

CERTIFICATION TO CURES UPDATES

LET'S GET STARTED

As an ONC Authorized Certification Body (ACB), Drummond will conduct a review of your product attestation to determine conformity for the 2015 Edition Cures compliance requirements. All applicable certifications are issued soon after required documents and final payments have been submitted.
